Read Me

Spitronics products are very versatile products than can be adapted for many different applications. They can be used as ECU. TCU, TxW etc. with different classes and features to each class. This makes documentation very big trying to explain to customers. The Online manuals were designed to make information more compact and let the user only download relevant documents or drawings on his PC or mobile. These manuals will require a good internet connection and may use a lot of mobile data on phones. So, plan what you need beforehand.

Information is divided in 2 groups. ***Product information*** and ***Application Specific*** manuals like ECU, TCU and TxW. Under each Application group you will find the different products and their relevant manuals. Each product's drawings are kept under the Product folder. There is also a ***Product Drawings Manual*** to guide you to find specific drawings fast. Some products like Mercury Idle Control, Mercury Coil drivers, Hyperspace Software, Android software are common to the product range and are kept in separate folders.

Under ***Product Information*** you will again find the different product folders. Under each product you will find the following manuals to help you find your way through the documents and download what you need.

Product Information manual
This manual will provide you an overview, features, specifications and a selection chart of the product.

Product Quick Links Manual
This manual has a list of topics and relevant documentation links such as Software, Manual, Drawing or Folder of that topic.

Product Quotation Form
This Excel document will help you select the right items of a product that you may need for your application. It also has relevant links to each item to give you more information around the item or to download software, manuals or drawings. It will also calculate the amount that you will pay for the complete package. You may also export the document to PDF and use it as a quotation form for a customer. In PDF the links will still be active but the selections and totals are frozen.

Gettings Started with the Product guide.
This guide will help a beginner on what he requires and where it is to download. It explains a bit of information on how the products work and the structure under which it is sold.

Should any links not work correctly please inform us so we can remedy the relevant document.
